

Get the Cert

Installing the CompanyV DeSpaminator Certificate

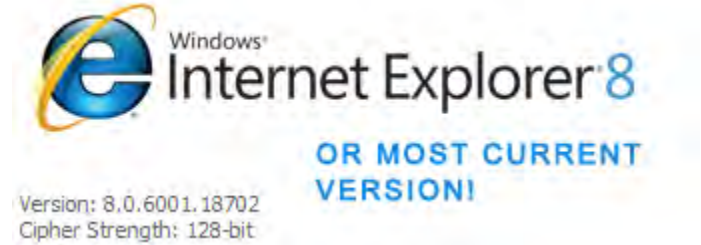

for email as trusted root certification authority is
required for mail servers by CompanyV

If you are going to be setting up mail in a Microsoft application please make sure your Microsoft OS and applications are all updated. Please close all other applications when installing the certificate and use Internet Explorer to install the certificate.

You will need to restart your computer after installing the certificate!

Open Internet Explorer

1. Open Internet Explorer
2. Click the Get The Cert image on the left for the cert.

Alternatively you can go to

<https://mail.yourdomain.com>

And click the “Get the Cert”

OR...

<http://www.companyv.com/support/squirrel-signing-authority.sqrl>

OR

<http://www.despaminator.com/ca.crt>

Open The Cert to Install

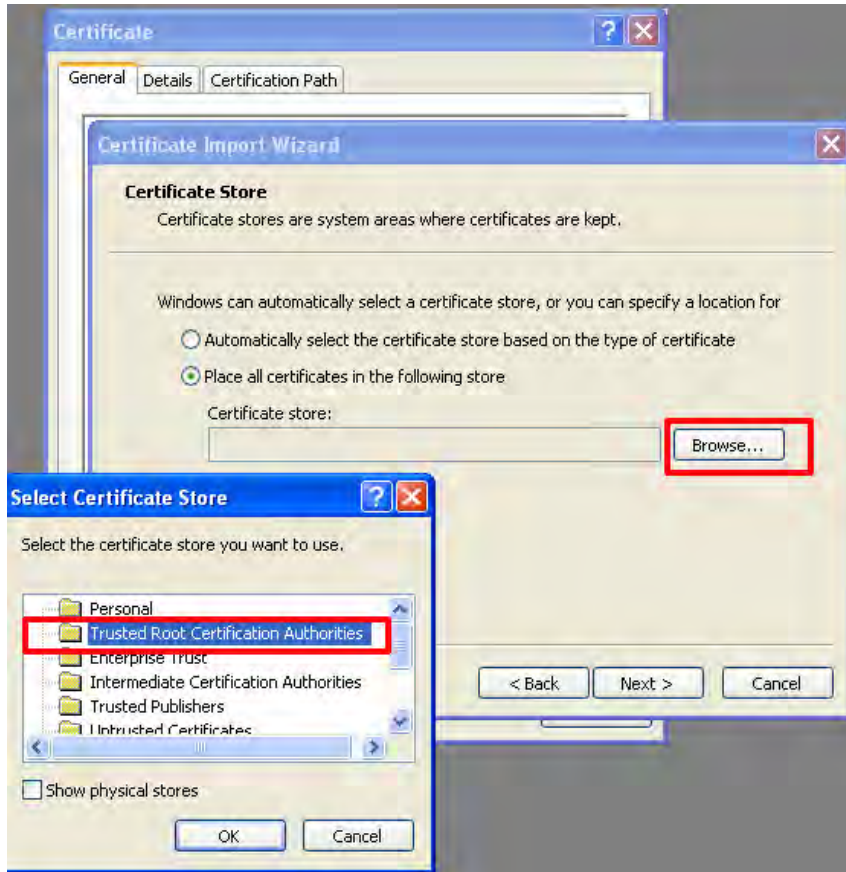

3. Open the file
4. Then click “Install Certificate”

Once installed you will be able to see webmail.companyv.com in the list of certificates. Despaminator.com is a CompanyV.com domain for serving the certificate

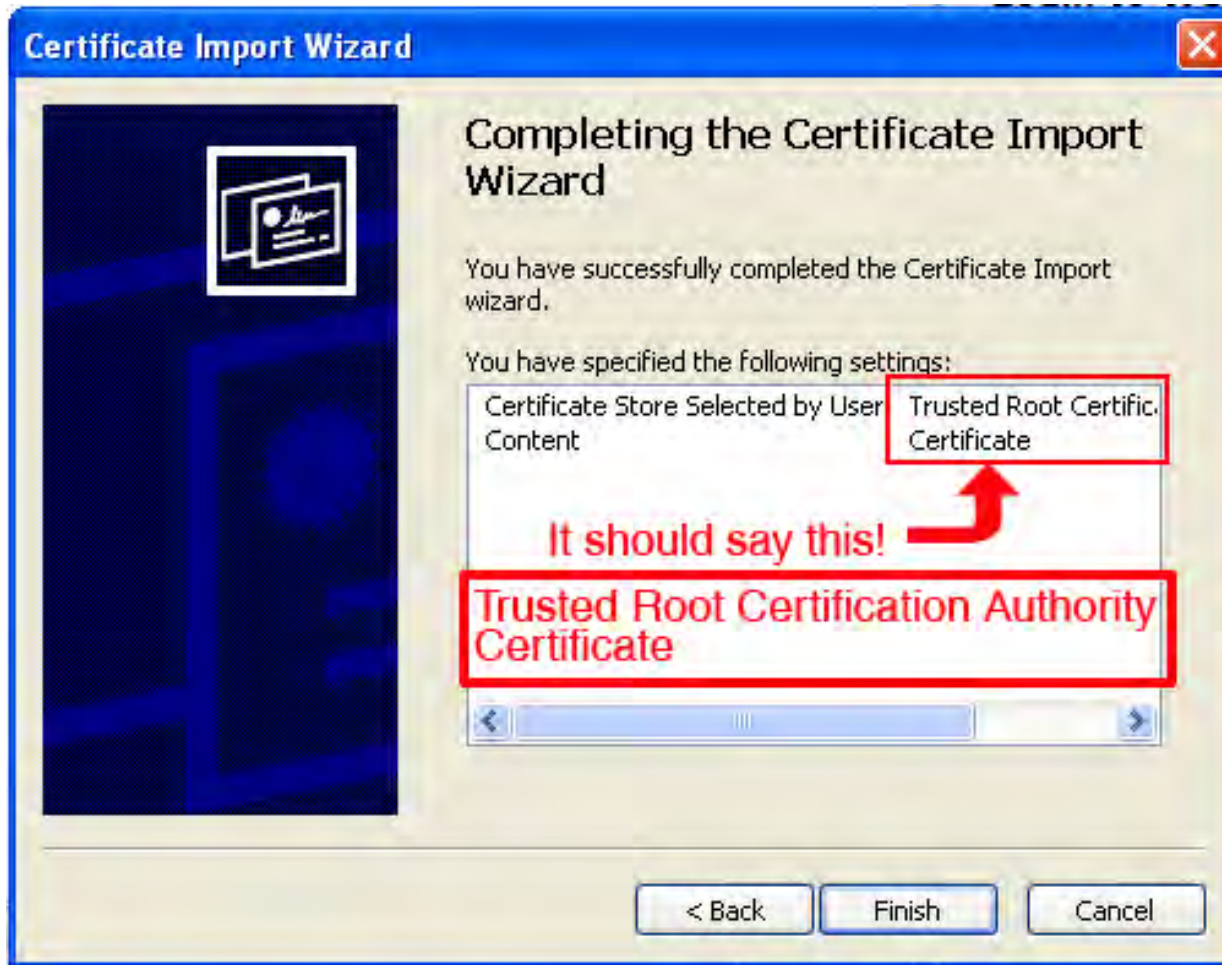

Browse for Trusted Root

5. Do NOT leave the default selection
6. Click the **second option**
7. Then click **Trusted Root Certification Authority**

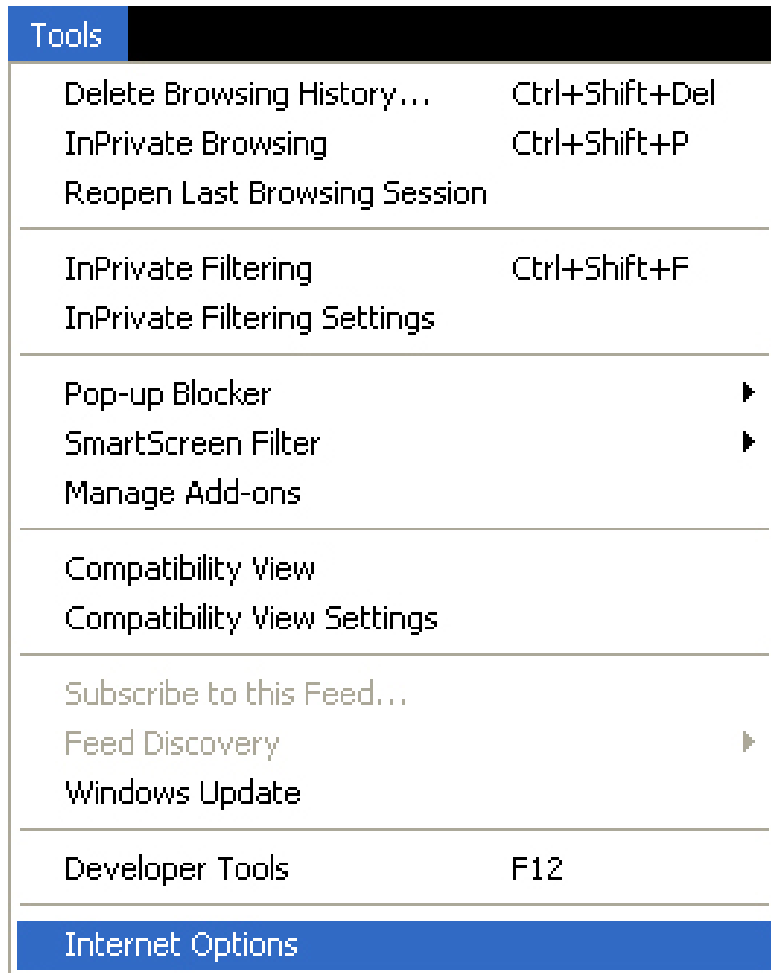

8. If it looks like this click finish!

There is a little more you need to do!

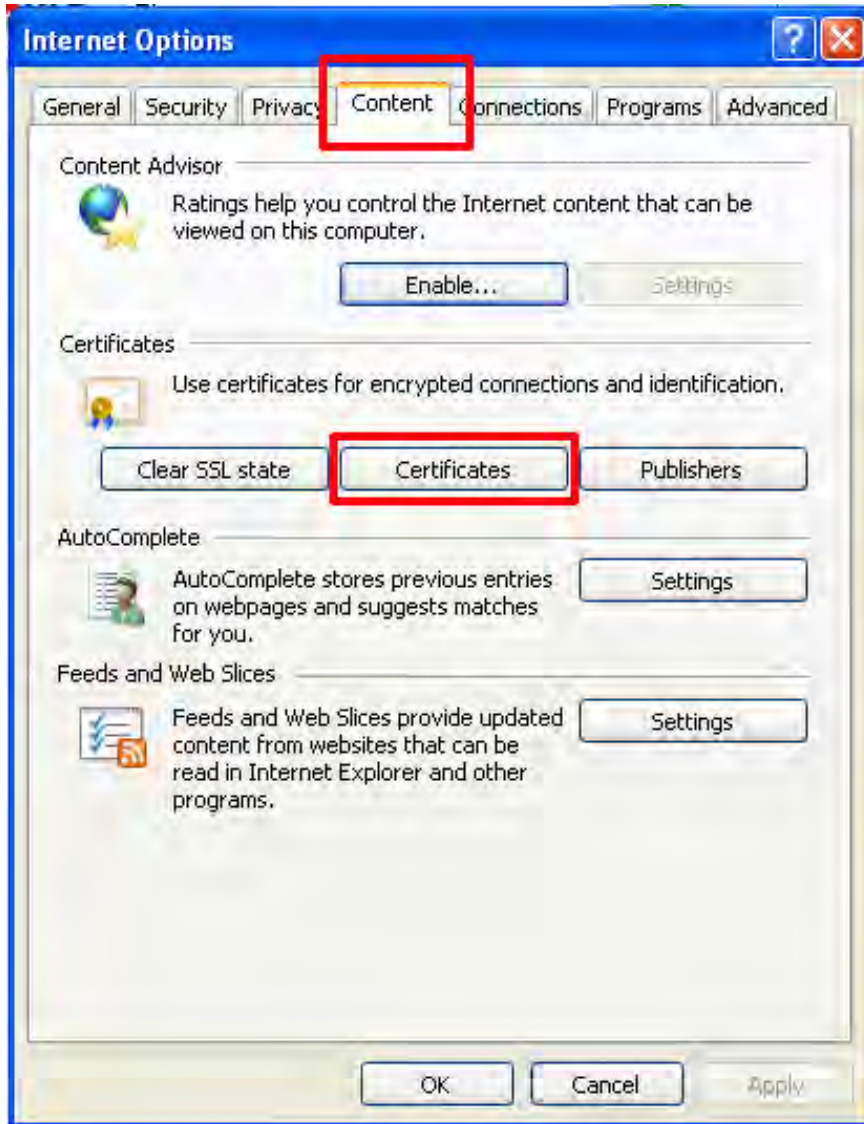

See next page...

In your Browser

9. Click Tools

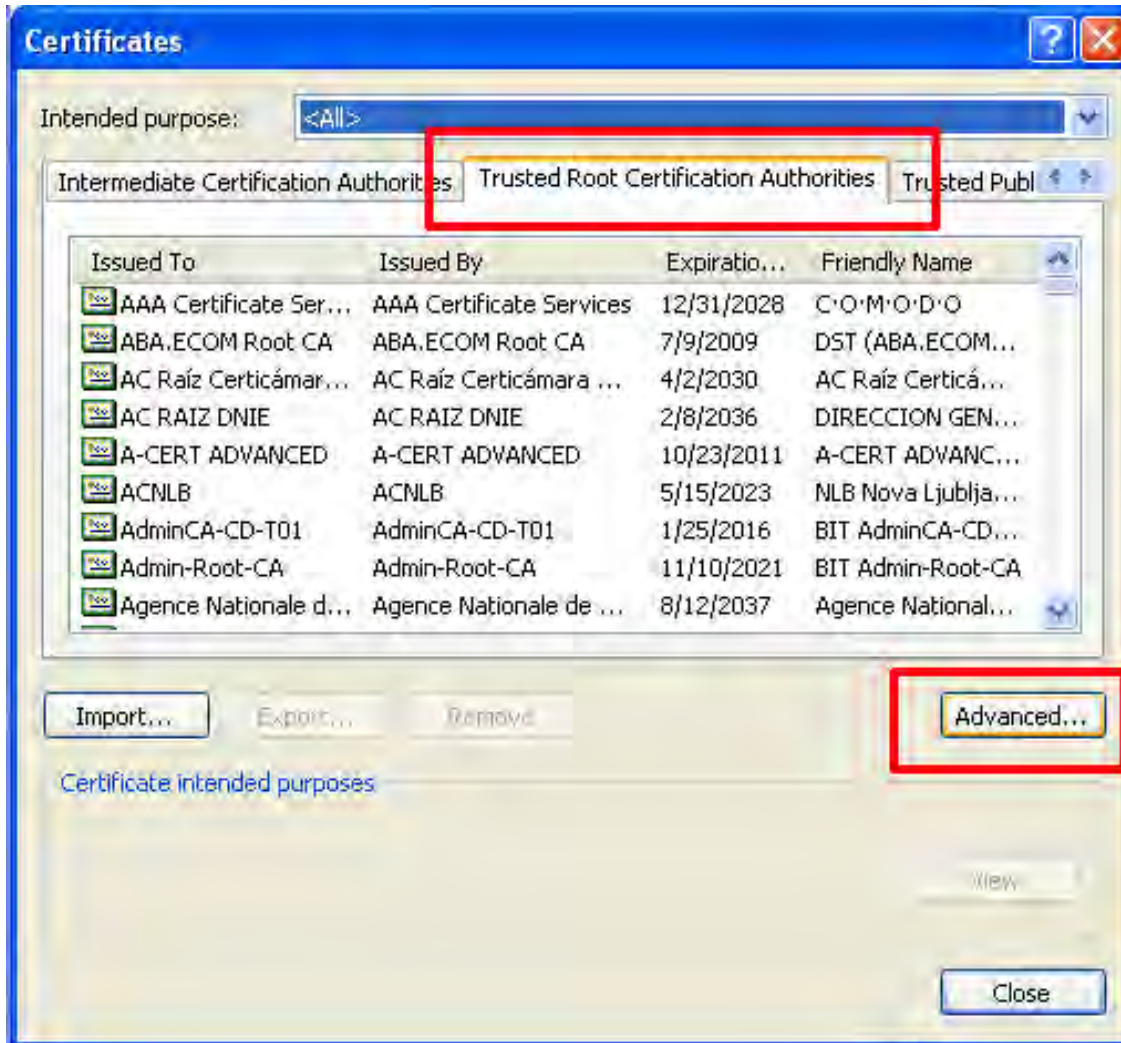

10. Then click
Internet Options

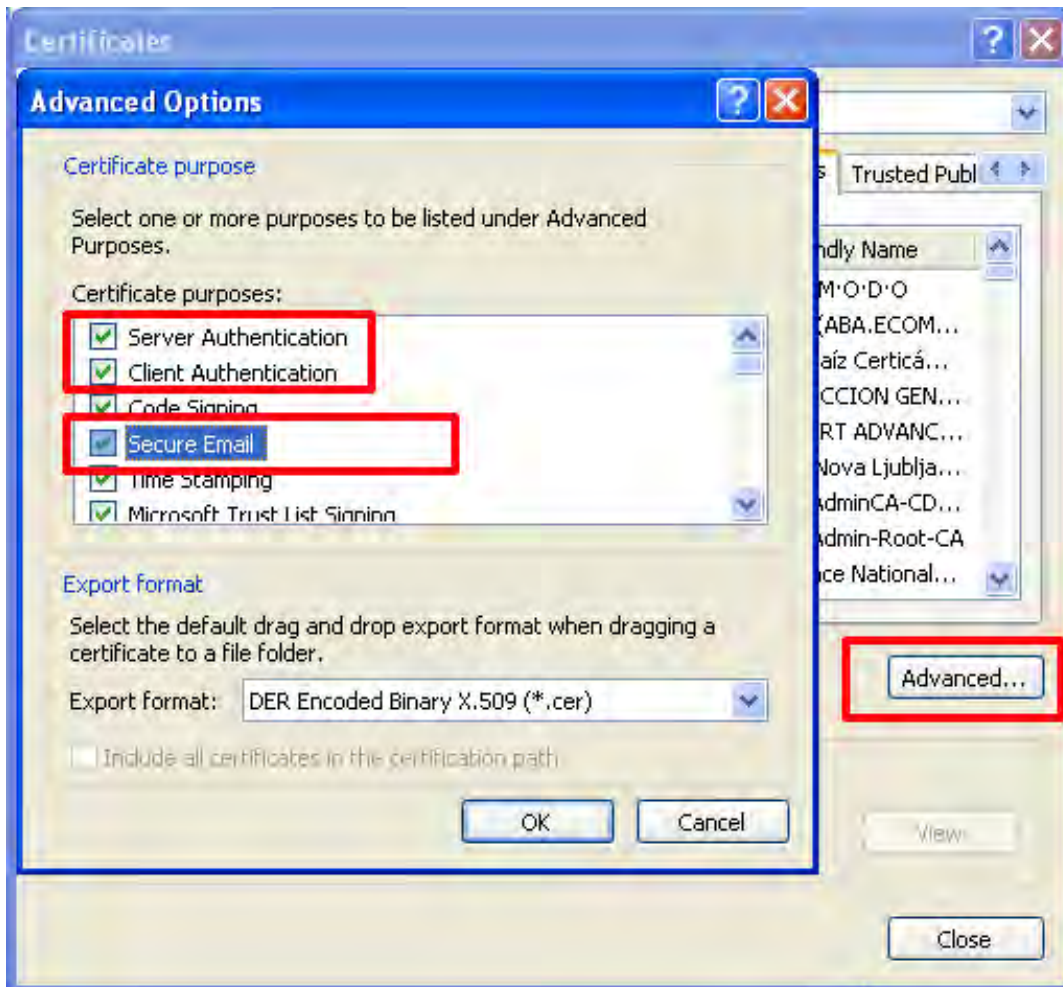

11. Click the “Content” tab at the top

12. Then click the center “Certificates” button

13. Select the tab for Trusted Root Certification Authorities

14. Then Click
the
“Advanced”
button

Check the boxes:

15. Server
Authentication

16. Client
Authentication

17. **Secure Email**

**PLEASE RESTART YOUR MACHINE SO THE
CERTIFICATE SETTINGS ARE SAVED IN YOUR
PREFERENCES!**

You have now installed the certificate required for sending
email on a CompanyV server!

Thank You
